The NuPulse® Standard Milker and the Goat Milker is the ultimate in simplicity and performance. The unique vacuum operated pulsator can be completely disassembled and rebuilt without tools. The pulsation rate is adjustable and it is so simple. The pulsator is built into the claw and operates from the vacuum supplied to it through the milk hose. As a result, there are no troublesome electrical pulsators or controls, and there is no clutter of hoses and wires.

The highly polished stainless steel pail and lid are beautifully crafted and meet all requirements for Grade A use. The high capacity pail is available in both a 35 lb and 65 lb models as well as a 68 lb plastic bucket.

The bucket milkers are also available with the Kleen-Flo® claw with the D#96 pulsator.
